# 1 Fall Garden to 5 Spring Gardens

Friends, that's a dead wrong condition for us here in the South, when most years three or more kinds of vegetables can be taken from a good fall-planted garden every day during the winter months.

Five times as many folks making spring gardens as make fall gardens may surprise you but it's true. Our records for the nearly forty years our business has been located in Atlanta prove it. Between January 1st and May 1st we send out five times as many garden seed orders as we do from August 1st to December 1st.

What's worse is that one-third or more of these fall garden orders are for turnip seed only. Now I know very well that the turnip patch for either salad or turnips is not to be "sneezed at." They are fine and have a proper and important place. But why limit the fall planting to turnips? Why do not as many people here in the South have fall gardens as spring gardens? You may know the answer. We do not unless that most of us have never realized the fact that the fall garden can be made almost as important as the spring garden if we will just give it a fair chance.

Just look at the vegetables besides turnips that come in for late summer and fall planting: Beets, Italian Sprouting Broccoli, Collards, Cabbage, Carrots, Kale, Mustard, Lettuce, Onions, (both sets and seed), Radishes, Tendergreen and Spinach. All of these are largely hardy, will stand plenty of frost and freezes. In fact, it takes an unusually hard winter to kill out most of these easily grown vegetables anywhere in the Cotton Belt, while they regularly go through most winters in the Gulf section, Florida, South Atlantic States and South Texas.

Further, if there is enough rainfall or moisture in the ground, both Bush and Pole Snap Beans can be planted up to September 1st in the Atlanta section and still later further South. Same is true of Bush Lima Beans (early), Cucumber, Okra, Garden Peas and

Squash. In South Florida one can plant both hardy and tender vegetables almost any time during fall or winter.

Gardens, both spring and fall are money-savers and health builders. One cannot stay in good condition of health without plenty of vegetable food. Every disease that holds our people back such as pellagra, forms of indigestion, poor blood and a lot of other ailments that could be mentioned are almost always caused by lack of vegetable food. The bigger and better the garden is kept, the smaller the store bill, the drug bill, the doctor's bill.

City folks on an average are in better health than the folks living on our farms. Why? Largely because city folks eat plenty of vegetables and fruit daily, the folks on our farms and in our smaller towns do not. The city markets are piled high with fruit and vegetables from all parts of our country every day in the year. City folks are buying and eating more and more vegetables and fruit, buying and eating less and less meat and bread and other things of that kind. Result, better health and stronger people in the cities; poorer health in the country and small towns.

Is such a condition necessary? No! The answer to it is both spring and fall gardens with plenty of different kinds of vegetables kept going in them just as near the year round as possible. Piece out with home canned vegetables and fruits from home acres. Your closet or pantry shelves should be full of cans or jars that you have or will put up this summer and fall.

If you question these statements as to the health and money-saving value of the garden ask your County Agent or even better, your Home Demonstration Agent next time you see her. She can give you facts that we cannot, because of lack of space.

Take your garden seriously. Give it a "square deal" this fall. While you are about it give thought to the home fruit orchard as well. It's also well worth your while.

H. G. HASTINGS.

## READ DIRECTIONS FOR ORDERING

SEND ALL ORDERS DIRECT TO H. G. HASTINGS CO., ATLANTA, GA. WE HAVE ABSOLUTELY NO AGENTS.

**Liberal Premiums** Please bear in mind that on seeds in packets and ounces only (no quarter-pounds, pounds or larger quantities), the purchaser may select 25 cents' worth extra on each dollar sent. This does not apply to orders for collections, plants, or bulbs, prices of which are net. See this Premium Offer on Yellow Order Sheet.

**Cost of Sending Money** In all cases where the order for seed amounts to one dollar or more, the cost of postoffice or express money order, or cost of registering the letters from places that are not money order offices, may be deducted from the amount of the order.

**Stamps** On orders of seeds where the amount is less than 50 cents, we will accept U. S. postage stamps in good condition (one, two and three-cent stamps preferred) the same as cash, but we would ask those remitting stamps to wrap them in oiled paper, if possible, to prevent their sticking together or to the order.

**C. O. D. Notice** Absolutely no plants or other perishable goods will be sent C. O. D. We advise against C. O. D. orders because of delays and high collection charges which are unsatisfactory to the customer and expensive to us if uncalled for and returned at our expense. We accept C. O. D. orders for seeds in exceptional cases when 25% of the order amount is paid in advance. This deposit is meant to cover collection and return charges in case the order is not called for and paid for by the customer.

**About Warranty** H. G. HASTINGS CO. gives no warranty, express or implied, as to description, quality, productiveness or any other matter, of seeds, bulbs or plants they send out, and will not be in any way responsible for the crop. If purchaser does not accept the goods on these terms, they are at once to be returned, and any money that may have been paid for them will be refunded.

Crops are dependent for success or failure on so many things besides seed that it is impossible for us to give any crop warranty or guarantee. This does not mean that we lack confidence in the items we sell, but we have no control over them after they leave our house, especially so as to the methods of planting, cultivating and fertilizing, all of which are important factors in the success of any crop. If we should warrant or guarantee our seeds, plants, or bulbs, in any way, we could be held responsible for the failure of the crop, regardless of cause, and this is a responsibility we cannot accept.

**We Pay the Postage** On all seeds in this catalog listed in packet, up through ounce, quarter pound and pound quantities, we pay the postage and guarantee safe delivery by mail. On all seed, plant and bulb collections we pay the postage. We pay the postage on seeds, plants and bulbs except in larger quantities where a "Not Prepaid" price is named.

**You Pay Postage Only** When ordering 5 Lbs. of seeds or over or large quantities of bulbs and plants listed at "Not Prepaid" prices, you pay the postage, express or freight.

If you desire shipment by Express or Freight, we can send your order "Collect," you to pay transportation charges on delivery. If you want your order delivered by mail, parcel post, the postage must be included with your order. Postage must be paid in advance.

Keep wet, hoe thoroughly and often. In Florida and along the Gulf sow seed Sept. to Nov. The plants will stand light frosts and should be planted so as to head in cool weather because they will not head properly in hot weather. 1 Oz. of seed should make 3,000 good plants. Set plants about 18 in. apart in row. Matures in about 3 months.

(118) Copenhagen Market—Earliest Large Round Cabbage

**Cabbage Culture** Work soil in seed beds as fine as possible. Beds should be slightly raised for drainage. Do not fertilize soil in seed beds to make it any richer than the open ground in which the crop is to be grown.

Sow seed in drills 6 inches apart across the bed, dropping the seed 5 or 6 to the inch. Thicker sowings mean spindling plants. Cover seed ¼ inch in heavy soils, ½ inch in light sandy soils; firm the soil after covering and then water the bed thoroughly. Keep beds moist but not soaking wet. Seed germinates in 3 to 8 days, according to weather. Keep young plants growing steadily from the start. When plants have made the fourth pair of leaves transplant to open ground. 1 Oz. of seed usually makes at least 1,000 good strong plants. Sow ½ to ¾ Lb. for plants to set one acre. Days to mature from plants are given for each variety.

# HASTINGS' BERMUDA ONIONS

(289) Hastings' Bermuda Onions—Earliest, Mildest Flavored—Most Attractive Onions in the World

**288 YELLOW BERMUDA ONION** The most widely and largely planted of the Bermuda varieties. Before we introduced our Crystal Wax this was generally called White Bermuda, although it is a light yellow or straw color. This is the variety that made Texas famous as an onion growing State and we have always rightfully claimed that Hastings' is the finest seed in the world. The higher quality Bermuda Onions grown from Hastings' Seeds bring the highest market prices and often premiums above the best market prices. Our illustration shows the Bermuda as grown from October planted seed. Less than six months from seed sowing to fully matured onions. Because of its mildness it is immensely popular with millions of people who dislike the strong flavor of most onions. Packet, 10c. ½ Oz., 15c. Oz., 25c. ¼ Lb., 75c. Lb., \$2.50. See Quantity Prices on Rear Color Sheet.

**NOTE**—Do not plant too early. Germination is poor in Aug. to Sept. 15 hot weather. Oz plants about 200 ft. of row; use 3-5 Lbs. per acre.

(296) Hastings' Prizetaker

**289 HASTINGS' CRYSTAL WAX BERMUDA** The most attractive onion in the world. Our own introduction and one of which we have been exceedingly proud. It is the only pure white Bermuda Onion and has a most beautiful waxy appearance that makes it sell on sight in the retail markets. In New York and other large markets our Crystal Wax sells at 25 to 50 cents per crate above the Yellow Bermuda. Except in color it is identical with the Yellow Bermuda; has all its desirable qualities combined with much more handsome appearance. Hastings' Crystal Wax is an excellent home garden Onion as well as for market gardens and shipment. Being such a mild and beautiful Onion and so easily grown it is especially suited to home garden use. This is the mildest and earliest of all Onions. Packet, 10c. ½ Oz., 20c. Oz., 30c. ¼ Lb., 80c. Lb., \$2.75. See Quantity Prices on Rear Color Sheet.

**296 HASTINGS' PRIZETAKER** Our Prizetaker is very large, frequently 12 to 18 in. around, and fine bulbs have been raised weighing from 4½ to 5 pounds each. We have seen splendid market crops of Prizetakers raised even under unfavorable conditions, in every one of the Southern States, showing it to be well adapted to our entire section. Prizetaker is a light straw-colored onion with a pure white flesh, very fine grain with rather mild flavor, and will keep for any reasonable length of time. Packet, 10c. Oz., 25c. ¼ Lb., 75c. Lb., \$2.50. See Quantity Prices on Rear Color Sheet.

**298 RIVERSIDE SWEET SPANISH** Superior to other strains of Sweet Spanish in flavor, mildness, keeping qualities and yield. Large, well shaped brown onion, weighs 1 to 3 pounds and unusually mild. When properly grown, without letting soil become too dry, it makes beautiful bulbs. Extremely popular for home gardens and is now creating a big market demand as well. Be sure to try this great Onion. Packet, 10c. Oz., 30c. ¼ Lb., 80c. Lb., \$2.75. See Quantity Prices on Rear Color Sheet.

**291 Hastings' Dark Red Globe Onion** Has a richness in coloring of the skin that is found in no other. Onions are large, perfectly globe-shaped, and of rich, deep dark red color. Packet, 10c. Oz., 25c. ¼ Lb., 75c. Lb., \$2.50.

# GRASS SEEDS—LAWN, HAY, PASTURE

**Lawn Culture** 5 Lbs. of seed will plant 1,000 sq. ft. (50x20 ft.) Plant a plenty of seed or you won't have a thick velvety Lawn. It is necessary to deeply prepare soil, mixing in humus and fertilizer and leveling off, before planting. Grass seed must not be covered with soil. After sowing seed, roll the soil surface with a light roller or firm in some other way. Firming is all that is necessary. Grass seeds need only to be pressed into a firm seed bed. (Total needed per 1,000 sq. ft. of lawn—5 Lbs. Grass Seed Mixture, 100 Lbs. Pulverized Sheep Manure and 25 Lbs. High Grade Fertilizer). Use Peat Moss for finest humus.

**550 HASTINGS' EVERGREEN LAWN MIXTURE** Notice the Evergreen lawn on the rear cover page. You, too, can have a beautiful lawn with Evergreen. Hundreds of the finest as well as the most humble homes in Atlanta and the South have beautiful lawns the year around and so can you make your "Home Beautiful" with a velvety green lawn. Without a green lawn no home is really attractive.

This is our own mixture proved by years of lawn making to be the best for the upper South. In the lower South it makes the finest textured fall, winter and spring lawn. You cannot buy it elsewhere. It makes a quick show and on well-prepared soil soon becomes a beautiful velvety lawn. If watered thoroughly once or twice a week during hot, dry weather it will stay green all the time in the upper South, as it does fine without attention during the fall, winter and spring. Follow our "Culture" directions and failure will hardly be possible.

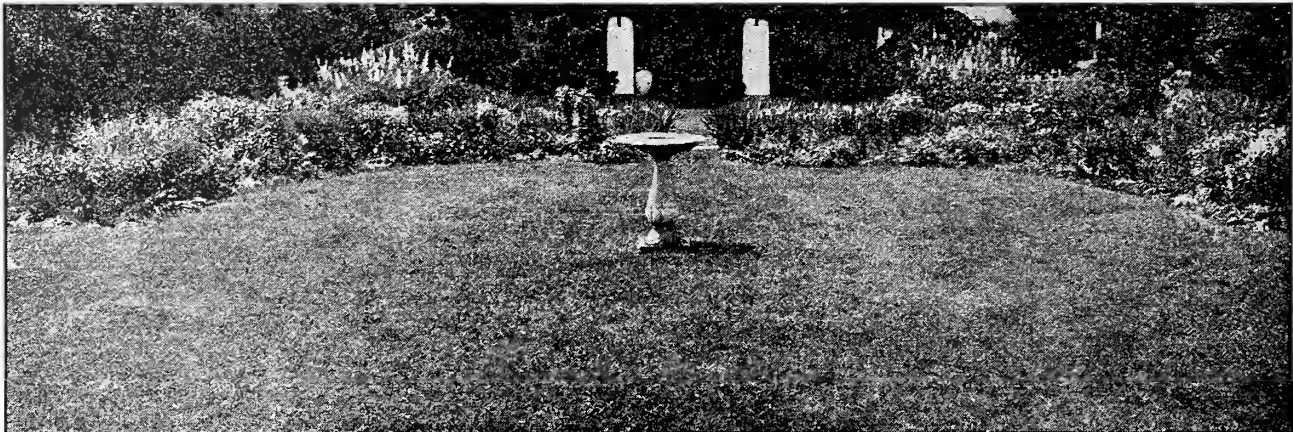

**PRICES**—Pound, 45c. 5 Pounds, \$1.95. See Quantity Prices on Rear Color Sheet.

**555 HASTINGS' SHADY LAWN MIXTURE** Our successful formula makes a wonderful winter and spring grass carpet in the upper South. In hot, dry summer it does better in shady places than other grasses. Shady Lawn Grass is our famous Evergreen Mixture, with the addition of Poa trivialis and Creeping Bent Grasses, the best grasses known for shady places. Most lawns have shady places, because trees are desirable. Bare spots in the lawn look bad and so we urge you to plant your shady places with this special mixture after using plenty of humus, such as Peat Moss or woods earth, and thoroughly preparing your soil. Follow our Lawn Culture directions. Recommended for the upper half of the South and farther North.

**PRICES**—Lb., 50c. 5 Lbs., \$2.25. See Quantity Prices on Rear Color Sheet.

**551 Hastings' Permanent Pasture Mixture** Recommended for the northern parts of Georgia, Alabama, Arkansas and South Carolina and farther north. It gives good results and is fairly permanent. It should be planted in the fall or early spring on thoroughly prepared, rich or heavily fertilized land worked smooth. Sow at least 35 pounds of seed per acre and it is best to add a pound each of Red and Alsike Clover to each 10 pounds of mixture. There is no Bermuda or Johnson Grass in the mixture. It is properly proportioned for best results and contains Blue Grass, Orchard, Meadow Fescue, Red Top, Tail Meadow and Domestic Rye Grasses.

**PRICES**—Lb., 40c. 5 Lbs., \$1.60. See Quantity Prices on Rear Color Sheet.

(550) Hastings' Evergreen Lawn Grass, properly planted during the fall, will make your house and lawn into "The Home Beautiful."

**533 KENTUCKY BLUE GRASS** Excellent lawn grass; ideal for golf fairways and greens; sweetest and best pasture grass. Maximum growth in spring; more effective the second year. Deep vivid green, leaf blades very narrow and plants slightly creeping. Ideal growth is 12 inches if left uncut. We make a specialty of fancy re-cleaned Blue Grass Seed for extensive lawn work, where pure vital seed, free from weeds, is essential. Sow 5 Lbs. per 1,000 sq. ft. for lawns; 40 Lbs. per acre for pasture. Lb., 45c. 5 Lbs., \$1.95. See Quantity Prices on Rear Color Sheet.

**531 HASTINGS' HULLED BERMUDA** Germinates in a week and gets a full stand much quicker than ordinary Bermuda. Plant from April to August, while soil is warm. With our hulled seed, you get a stand almost as quickly as with Rye Grass. Lb., 65c. 5 Lbs., \$2.75. See Quantity Prices on Rear Color Sheet.

## 530 Bermuda Grass

Sow seed from April to August. Seed will not grow when ground is cold. Lb., 55c. 5 Lbs., \$2.25. Quantity Prices Page 34.

## 545 Red Top

Herd's Grass. Valuable for lawns and winter pastures. Plants slightly creeping, 2 ft. high in early fall. Grows on all soils but best on low, stiff, moist land. Holds well in summer if repeatedly mowed; stands wet weather. Sow 15 Lbs. per acre for pasture or 5 Lbs. per 1,000 sq. ft. for lawn. Lb., 35c. 5 Lbs., \$1.40. See Quantity Prices on Rear Color Sheet.

## 532 HASTINGS' RYE GRASS

**AMERICAN GROWN.** The Winter Grass for all the South. Superior to foreign grown Italian and English Rye Grass seed. Our fancy seed is heavier and more plump, full of vitality, quick to start and strong in growth. It is a fast-growing annual grass with long flat leaves, growing in tufts if left uncut. It is valuable to dairymen for winter grazing, but its great use is for winter lawns.

Scratch seed in Bermuda sod each fall for a year-round green lawn. It lasts until the Bermuda comes out again in summer. By itself it makes a delightful green lawn in sun or shade, all fall, winter and spring. It stands repeated mowing on lawn or golf green. Sow 10 Lbs. per 1,000 sq. ft. (50x20 ft.) for lawn; 50 Lbs. per acre for pasture. Hastings' Fancy Seed—Lb., 25c. 5 Lbs., 75c. Postpaid. See Quantity Prices on Rear Color Sheet.

**539 Rough Stalked Meadow Grass—Poa trivialis** Best of all for shady lawns. Creeping plants with narrow, flat leaf blades; adapted to all soils, including sandy, in all sections where Blue Grass grows. Reaches 12 in. high in early summer if left uncut. Lb., 60c. 5 Lbs., \$2.40. See Quantity Prices on Rear Color Sheet.

**538 Meadow Fescue** English Blue Grass. Grows 3 feet in summer with broad, flat leaves; giving hay and pasture on any soil not water-logged. Sow 35 Lbs. per acre. Lb., 40c. 5 Lbs., \$1.60. See Quantity Prices on Rear Color Sheet.

**542 Orchard Grass** Widely used for hay and pasture and it even thrives under trees. Grows on all soils, reaching 4 feet in late spring. Bears closest grazing. Sow 45 Lbs. per acre. Lb., 35c. 5 Lbs., \$1.40. See Quantity Prices on Rear Color Sheet.

**546 Timothy** The most important hay and pasture grass for the upper South and farther North. Coarse, vigorous plant with very broad leaves; grows 3 ft. in summer on rich land. Sow 30 Lbs. per acre. Lb., 45c. See Quantity Prices on Rear Color Sheet.

**553 Carpet Grass** Valuable pasture and lawn grass for the lower South. It spreads rapidly, stands closest grazing and grows even on poor sandy soil with a little moisture. Lb., 35c. 5 Lbs., \$1.40. Quantity Prices on Rear Color Sheet.

**PLANT GOOD GRASS SEED.**

(500) Alfalfa or Lucerne Clover—Most Valuable Clover Known

**507 Sweet Clover or Melilotus** Bokhara Clover. As a land-builder it has few equals. Resembles Alfalfa and has been called "Alfalfa's twin sister." It is fine for raising bees. Sow 12 pounds per acre in August to October for fall planting. True white flowered, not yellow flowered, Sweet Clover. Hulled clean seed. Lb., 35c. Postpaid. See Quantity Prices on Rear Color Sheet.

**SWEET CLOVER INOCULATION.** For 1/2 Bu., 35c. 1 Bu. size, 50c. 2 1/2 Bu. size, \$1.00. Postpaid.

**509 White Clover** For the central South and farther North. Most all lawn and pasture mixtures should have some White Clover. By itself it makes good grazing for cattle and sheep. It is perennial with uncertain habits of growth, sometimes covering the ground with a thick mat of vigorous plants and sometimes lies comparatively dormant, so it should be seeded into sod or mixed with other clovers or grasses. It succeeds best on moist ground or during a wet season. Use 10 pounds per acre or half that amount in a mixture. Fancy seed. Lb., 60c. 5 Lbs., \$2.25. See Quantity Prices on Rear Color Sheet.

**WHITE CLOVER INOCULATION.** For 1/2 Bu., 35c. 1 Bu. size, 50c. 1/2 Bu. size, \$1.00. Postpaid.

**AUSTRIAN WINTER PEA** Remarkable winter legume. It resembles an English Pea in size of seed, Canada Field Pea in character of vine growth. It's a heavy yielder, can be grazed and will put on a good second growth with better stooling out. It makes splendid hay, excellent for turning under, a fine winter cover crop and soil improver. It grows about waist high, can be planted by itself or with a light seeding of oats or rye to hold vines off the ground. Sow like Vetch, 20 to 30 pounds per acre.

**PRICES**—Lb., 25c. 5 Lbs., 85c. See Quantity Prices on Rear Color Sheet.

**AUSTRIAN PEA INOCULATION.** For 1 Bu., 35c. 2 Bu. size, 50c. 5 Bu. size, \$1.00. Postpaid.

**WINTER VETCH** SAND, HAIRY OR WINTER VETCH. The hardy variety, standing severe winters in all parts of the South without injury. This is the only variety safe to plant. Do not allow yourself to be fooled into buying Spring Vetch, English Vetch or Oregon Vetch. Vetch makes a magnificent hay crop in spring and leaves added fertility to the soil. Broadcast the seed, mixed with oats or rye for support, at the last working of corn and cotton. It matures seed in June and can be plowed under and a summer crop planted. If this is done, the land will be reseeded in Vetch. A good stand will come up during late summer and make a heavier growth the next year. Start it making your land rich this fall. Seed should be inoculated.

**PRICES**—Lb., 30c. 5 Lbs., \$1.00. See Quantity Prices on Rear Color Sheet.

**VETCH INOCULATION.** For 1 Bu., 35c. 2 Bu. size, 50c. 5 Bu. size, \$1.00.

**DWARF ESSEX RAPE** **DESCRIPTION**—Rape top growth looks much like Rutabaga Turnips but does not form a bulbous root. It grows 15 to 30 in. high, making a splendid green feed and forage crop relished by all kinds of stock but principally planted for hogs and poultry. It is also popular for "greens" on the table and is a fine substitute for turnip or spinach greens. Rape is hardy, standing any ordinary cold in the Cotton Belt or farther South. It is ready for grazing in 8 to 10 weeks from planting, with its broad, succulent leaves, and we know of no crop planted during fall and winter that will bring as great returns for such a little expenditure of time and money for seed.

**CULTURE**—Plow and harrow your land down fine. Plant any time from August to April, 10 pounds broadcast or 3 to 4 pounds per acre if planted in drills like turnips. If broadcast, cover the seed by a light harrowing. If there is a showery season Rape may be planted between the corn rows at the last working.

**PRICES**—Packet, 10c. Lb., 25c. 5 Lbs., 85c. Postpaid. See Quantity Prices on Rear Color Sheet.

## 500 ALFALFA

Alfalfa in the South will produce 5 to 7 tons of hay to the acre each year and in true value is worth 45% more than other clovers and 60% more than Timothy hay. It will grow 4 or 5 crops a year and it does not exhaust the soil; it enriches the soil. Its long branching roots penetrate far down, so it is a gigantic subsoiler, resists drought, and gets plant food where other crops would be a failure. It is adapted to almost the entire South. Sow on high and rather dry ground and cut only when coming into bloom. Sow in thoroughly prepared soil, broadcast or in drills, at the rate of 20 pounds per acre. Seed should be inoculated.

We sell only the highest grade seed, 99% purity or over, Best Western grown seed, the strongest on the market.

**ALFALFA INOCULATION.** For 1/2 Bu., 35c. 1 Bu. size, 50c. 2 1/2 Bu. size, \$1.00. Postpaid.

**501 Alsike Clover** Swedish Clover. Best clover for wet lands. Similar to Red Clover but more slender stems and smaller leaves; blossoms white shading pink. Fine with grasses and Red Clover for hay or pasture. Grows well in upper South.

Lb., 55c. Postpaid. See Quantity Prices on Rear Color Sheet.

**ALSIKE CLOVER INOCULATION.** For 1/2 Bu., 35c. 1 Bu. size, 50c. 2 1/2 Bu. size, \$1.00. Postpaid.

**504 CRIMSON CLOVER** Valuable annual clover for sowing in late summer and fall. It will yield 8 to 10 tons of green feed per acre. 1 1/2 to 2 tons of hay, and is considered worth \$20.00 per acre as a fertilizer crop. Succeeds on almost all soils except the poorest, even on light sandy or loamy soils of the upper South. Crop can be grazed during winter and if stock is taken off in March a full crop will be made. Broadcast 20 to 25 pounds per acre and harrow in lightly. Inoculate seed.

Lb., 30c. 5 Lbs., \$1.00. See Quantity Prices on Rear Color Sheet.

**CRIMSON CLOVER INOCULATION.** 1/2 Bu. size, 35c. 1 Bu. size, 50c. 2 1/2 Bu. size, \$1.00. Postpaid.

**508 American Grown Red Clover** Valuable farm crop in the northern part of the Cotton Belt for pasture, hay and soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring, September and March being best. Highest grade American Grown Seed.

Lb., 55c. Postpaid. See Quantity Prices on Rear Color Sheet.

**RED CLOVER INOCULATION.** For 1/2 Bu., 35c. 1 Bu. size, 50c. 2 1/2 Bu. size, \$1.00. Postpaid.

**505 Lespedeza—Japan Clover** Common Lespedeza. Does well over a wider territory than other varieties. In Florida sow in fall for best results, elsewhere South plant fall or spring. Standard hay and pasture plant, reseeded itself each year except on very sandy and dry soil. Creeping habit on poor ground and 12 to 18 in. bushes on good land. Lespedeza makes good grazing, is fine for turning under and makes a good cover crop. It is deep rooted.

Lb., 30c. Postpaid. See Quantity Prices on Rear Color Sheet.

**LESPEDeza INOCULATION.** For 1/2 Bu., 35c. 1 Bu. size, 50c. 2 1/2 Bu. size, \$1.00. Postpaid.

(400) Dwarf Essex Rape for Feed and Food

Hastings' 100-Bushel Oats from Recleaned Seed

## WHEAT CULTURE

Early planting is best. In early seeding, plant one bushel of seed per acre. After about November 15, it's better to use  $1\frac{1}{4}$  to  $1\frac{1}{2}$  bushels per acre. Plant in drills, using the "open furrow" method, the same as for Oats. Wheat is easily grown in the South.

## NEW GASTA WHEAT

### HASTINGS' PLANTATION GROWN SEED

Improved Blue Stem. Newest and finest strain of Blue Stem, beardless wheat, developed by the Georgia Experiment Station and being extensively planted now that it is so well known. Gasta is the kind we plant on the Hastings' Plantation because it has proven a heavier seeder and with stronger stems than the old variety. It better resists storms, seems to be hardier and surely makes more grain per acre. We recommend it as the best wheat for fall seeding. Write for our best prices.

## RED MAY OR BLUE STEM WHEAT

Also called Purple Straw. The favorite among Southern wheat growers. It has been the most generally satisfactory beardless variety. It's a fine, rather early, productive wheat. Good for grain production or if you cut it when "in dough" makes a splendid hay crop. Write for prices when ready to buy.

## FULCASTER WHEAT

This is a bearded wheat of the finest type grown. It's strong, vigorous and heavy yielding. It makes satisfactory crops in good seasons and bad. It's extremely hardy, standing our severest winters without serious injury, and a safe, reliable variety to plant.

We especially recommend our Fulcaster, for it will stand adverse conditions better than any variety of wheat we know. An acclimated wheat that makes heavy yields. Write for prices on quantity you need when ready to buy.

## HASTINGS' 100 BU. OATS

Best of all heavy yielding, rust-proof oats for the South. Hastings' 100-Bushel is a true strain of Southern rust-proof oats. Planted in early fall, it grows off quickly and has proven almost as hardy as rye. Stools out strongly and makes the best grazing for cattle, hogs, horses and mules during winter and early spring. Our 100-Bushel is the heaviest yielder of all, the best main-crop oat to plant in the South. It outyields Appler, is a sound seeder and you should plant it for your main crop.

We grow the seed ourselves on the Hastings' Plantation, our finest selected strain, harvested and recleaned with the most modern machinery to take out weed seeds and light seeds, so every plant coming up is capable of vigorous growth and maximum yield. Write for our best prices on amount you want. It will certainly pay you.

## FULGHUM EARLY OATS

The best early-oat with exceedingly heavy straw. A three-year test by one of the Southern Experiment Stations shows that it is eight days earlier than 100 Bu., and the yield per acre is less than 100 Bu. Its greatest value is to prolong harvest season, where there is limited machinery equipment, and earlier harvesting allows your summer crop to be planted in time to make a heavy yield.

Write for our best prices on quantity desired.

## BEARDED BARLEY

There has been a great increase in barley planting, especially by poultry raisers, for winter green feed and grazing. Furnishes fine grazing through the fall, winter and spring; also makes a fine quality hay. If not grazed too long Barley may be harvested for grain, making it a dual purpose crop. Broadcast 2 bushels per acre. Write for our best prices on quantity you want when ready to buy.

## HASTINGS' ABRUZZI RYE

**SOUTHERN GROWN**—All our rye is strictly winter rye and perfectly hardy. It is Southern grown and adapted to this entire section, for winter grazing or grain production. With half a chance it almost invariably "makes good" wherever planted in the South. Every bushel of it goes through our recleaning machinery, which takes out dust, trash and light grains left by threshing machines. It's exactly what you need to make a successful rye crop this winter. Write for our best prices on quantity you want when ready to buy.

## HASTINGS' GEORGIA RYE

Southern Grown. The old-time favorite for winter grazing in the South. Far superior to Rosen and other cheap substitutes. Makes fine pasturage but not so much grain as our Abruzzi. Write for best prices when ready to buy.

## GRAIN PASTURE MIXTURE

### BEST GRAIN PASTURE FOR HOGS AND ALL STOCK

Made of the finest winter growing grains and forage crops, including Oats, Rye, Wheat and Barley for grazing purposes with enough Vetch and Austrian Peas in just the right proportion to add variety and soil improvement to the pasture.

This mixture acts as a cover crop, keeping the land from "washing" during the winter rains and turning it under before the summer crop builds up your soil. The grazing stock will manure the land, saving fertilizer and saving spreading it. If you keep stock off while ground is wet, your land as well as stock will be a lot better off for this grain pasture.

Don't pick the poorest piece of land and expect good pasturage. Use as good land as you can spare and plant early.

Broadcast at least 100 pounds per acre, 150 pounds is better, from September until mid-winter. Break and harrow land as for oats. Sow broadcast and harrow it. Give it a chance and your pigs and breeding stock will carry through winter and spring in fine condition.

**PRICE**—Not Prepaid—50 Lb. Bag, \$2.00. 100 Lb. Bag, \$3.50.

## CERESAN—TO PREVENT SMUT

The organic mercury disinfectant most effective in prevention of "Smut," the greatest drawback in grain plantings. Smut or Rust can easily ruin a crop of oats or other grain if seed is not disinfected before planting. We treat our own seeds before planting on the Hastings' Plantation because it pays well. We urge you to treat all your grains too.

Keep all barberry bushes cut close to the ground. Treat every lot of oats, wheat and barley you plant with New Improved Ceresan. The day before planting spread grain on floor and sprinkle thoroughly with a solution of this new Ceresan. Simple dilution directions are printed on packages.

$\frac{1}{2}$  Ounce treats a bushel of seed. The cost of treating seed with New Improved Ceresan is now less than 3c per bu. It surely pays to prevent grain smut in your crops.

**NEW IMPROVED CERESAN**—For treating grain seed to prevent smut. Order it to come with your seed. It can now be sent by mail. Postpaid—Lb., 85c. 5 Lbs., \$3.25. Write for literature.

**REMEMBER!** Write for special quantity prices as soon as you are ready to buy on all fall grains. We cannot make definite quantity prices as this is written but will give you our closest prices when you are ready. "It always pays to Plant Hastings' Seeds."

# HASTINGS' SWEET PEAS

## Are The Finest Sweet Peas In All The World

This is probably the most popular flower grown today and more improvements have been made than on perhaps any other flower. In the lower South, Sweet Peas are grown through the winter. In the upper South plantings are made from November to March. Experts' opinions declare these the very best of each color in existence.

**Culture** Plant from December to March in rows. Stake or run vines on wires. For long flowering, dig rows out 12 inches deep, fill in 6 inches with well-rotted manure and soil mixed, drop seeds and cover 2 to 3 inches, gradually filling trench as growth starts. Be sure to plant at least a few rows and keep on cutting the flowers as they open so they will keep blooming longer. To grow the largest flowers, plant early in good soil worked deep, run rows north and south if possible, remove the early growth of all but two branches and thin plants to at least 6 inches apart. Water thoroughly when needed. Culture directions are on each package. One ounce plants 50 feet of single row.

**LATHRYUS**—Hardy Perennial Sweet Pea. See page 26.

**EARLY FLOWERING SWEET PEAS** Especially adapted to greenhouse culture and outdoor winter planting in the lower South. They bloom about two weeks sooner than Spencer Sweet Peas planted at the same time, and bloom almost as freely. Try some along with the regular Spencers. Flowering earlier, they have that much longer to bloom before hot weather, an advantage over regular Spencer Sweet Peas. The Early Flowering type or race is the newest thing in Sweet Peas.

Our 15c Packets contain 1/4 Oz. net of seeds.

# Bulbs For "The Home Beautiful"

HASTINGS' BULBS—LIKE HASTINGS' SEEDS—ARE THE FINEST IN AMERICA

## Hastings' Mammoth Crocus

The first flower to bloom in the spring. Farther north it is often seen while snow still covers the ground. It is perfectly hardy and may be left in the ground to bloom for years.

Crocuses may be planted for bed effects with other bulbs and will bloom and be out of the way before other bulbs make their appearance. They may be grown in pots and boxes also but their natural and most beautiful effect is from planting them all through your lawn. They grow very low and will not hurt the lawn, which can be mowed or cut close except during the two or three weeks the crocuses are in bloom.

Crocuses attract attention because of their extra earliness and delightful rich colorings at a time when no other flower is in bloom outdoors. They are most effective in large numbers, 100 to 500 in each bed or a part of your lawn. Plant Crocus Bulbs Sept. to December.

2100 **BARON BRUNOW**—Purple Mauve. Very pretty and fine.

2110 **CLOTH OF GOLD**—Yellow; Brown. Exquisite combination.

2120 **NON PLUS ULTRA**—Deep Purple. Conspicuous white edge.

# HYACINTH BULBS

**Culture** Hyacinths do best in a rich, light loam but do well in any good soil. For bedding and other outdoor planting, set bedding bulbs 6 to 8 inches apart each way and 10 inches apart for the selected exhibition varieties. Cover each bulb about one and a half times its own depth.

For pot culture with the exhibition varieties the most beautiful spikes are made with only one bulb to each 5-inch pot or three or four in a larger pan. It is essential for blooming indoors that the growth be started in the dark. A frequent mistake is made by bringing the bulbs into the light too soon, resulting in a failure to bloom or weak spikes.

Potted bulbs may be entrenched or heeled in the garden and covered with six inches of ashes or gravel for moisture and to prevent frost damage. A bed of ashes should be beneath the pots too, to keep out worms. They may also be kept dark and well watered in a cold-frame or cool cellar. Keep them dark for 12 weeks and then keep in low temperature (about 50 degrees) for 2 weeks until top growth is well developed. Then you may force them as rapidly as you wish. You will have strong, compact spikes by keeping close to the glass or window and giving plenty of air. Plant September to December.
